Long lasting HA Filler?

Patented **MCL*** technology

*MCL : Multi Staged Crosslinking

High viscosity is obtained through patented stage micro beads manufacturing technology based on cross linked Hyaluronic Acid

* Data on file

Technology in existing HA filler
Primary or Secondary cross-linking can be different in each company.

Test result conducted by a respectable laboratory

Long lasting HA Filler? Patented **MCL*** technology

ReMedium in Semi-solid Gel state

Due to high cohesiveness and viscosity,
ReMedium is not easily dissolved
by Hyaluronidase in the body.
(The long-lasting mechanism)

Viscosity Test

Picture of viscosity test taken after 4 minutes

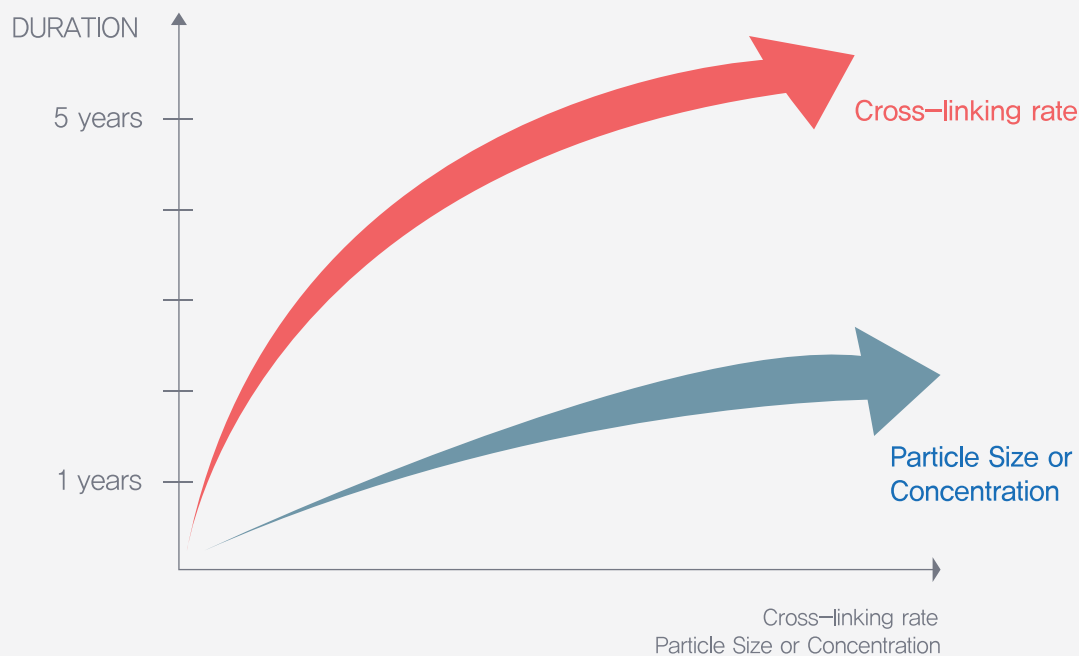

*MCL : Multi Staged Crosslinking

Long lasting HA Filler?

Patented **MCL*** technology

An elaborate product with high viscosity and cohesiveness through its high cross linking rate, and a very low particle size to provide moldability, longevity and shape maintenance after procedure.

Longevity comparison graph

* Data on file

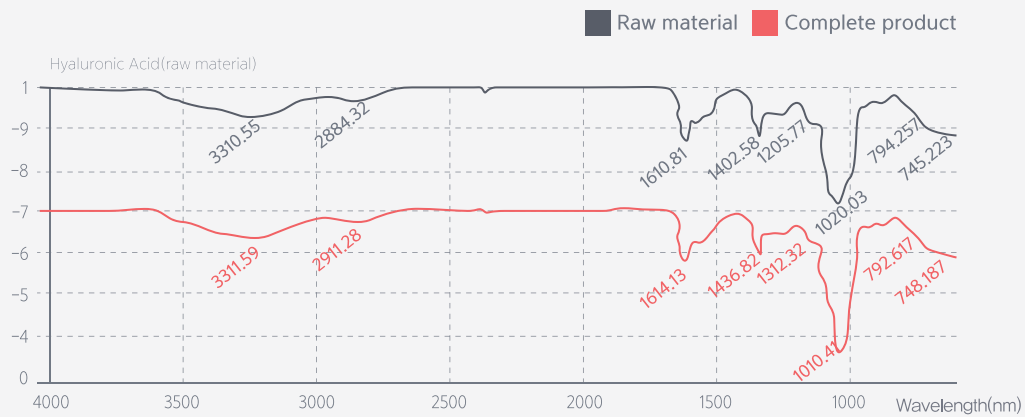

Comparison to conventional products that claim to have produced a long lasting HA filler

Most companies claim to have successfully manufactured a long lasting HA filler by increasing the cross-linking rate. However, due to limitations in the cross-linking technology these products instead have only increased viscosity and particle size, which does not contribute to a long lasting HA filler. Moreover, products that have only raised viscosity does not show good moldability.

Safe & Removable

The product is safe with no chemical modifications in the HA, even after high cross-linking process.

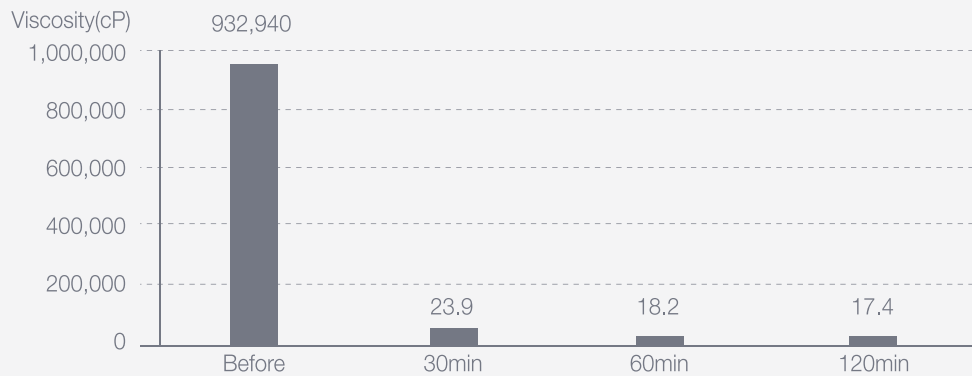

Refractive absorbance analysis

* Data on file

The wavelength pattern of ReMedium is the same as its raw material, showing that the product has not altered its physical properties.

Hyaluronidase test

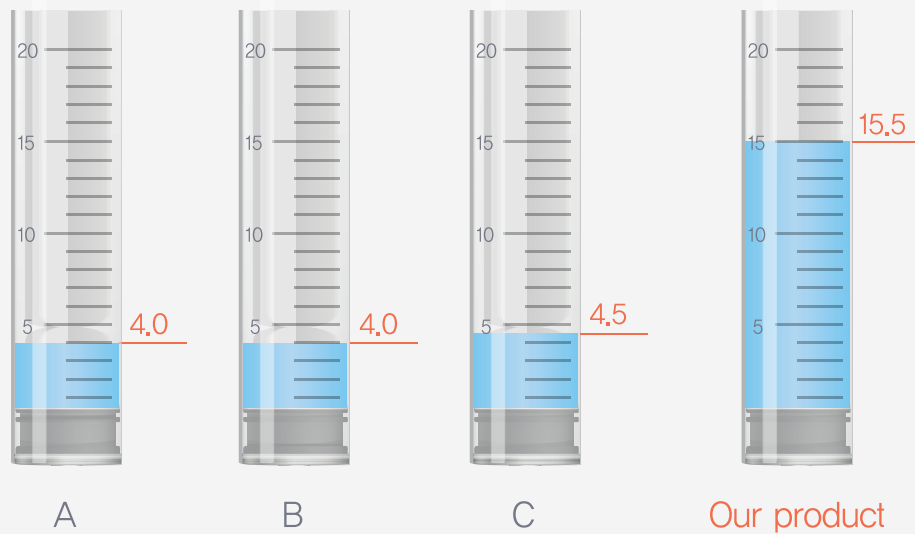

* Data on file

ReMedium perfectly dissolves through Hyaluronidase.

Superior hydrophilic capacity

Our product provides excellent volume effect through its high hydrophilic capacity and stable molecular structure even after high cross-linking rate.

Comparison of moisture retention

* Data on file

Centrifugation at 3,000 rpm for 30 minutes
(Status: 500cc of water added to a sample of 1cc)

- Shows higher volume effect compared to other fillers of same amount
- Excellent volumizing effect and easy molding even with a small amount

HYALURONIC ACID FILLER

ReMedium

A NATURAL, SAFE AND LONG-LASTING HA FILLER

	ReMedium-Fine	ReMedium-Mid	ReMedium-Sub-Q
			
HA concentration	20mg/ml	20mg/ml	20mg/ml
Volume	1ml X 1cc	1ml X 1cc	1ml X 1cc
Needle	30G 13mm UTW Needle (Ultra Thin Wall)	27G 13mm UTW Needle (Ultra Thin Wall)	25G 13mm UTW Needle (Ultra Thin Wall)
Cross linking rate	★★★★☆	★★★★☆	★★★★☆
Area used	Mid Dermis Fine Wrinkle	Mid-Deep Dermis	Volume-Dermis

Increase long lasting effect in the human body by creating pearl shaped beads to overcome the fast dissolution through natural hyaluronidase of conventional reticulate structured HA.

ReMedium

ReMedium completed its clinical trials on March 2009
(Seoul National University Hospital) and export approvals were obtained.
It is a subtle product that has 5 year clinical experience
in Japan where safety and longevity has been verified.
Currently approvals are being processed in 18 countries.
